Inside Alphabets money-spinning, terrorist-foiling, gigabit Wi-Fi kiosks

The urban sidewalk kiosks from Sidewalk Labs will sport a battery of sensors to monitor cities, traffic and suspicious packages.

White House: Technology and the Future of Cities

Cites Argonne Lab's ubiquitous urban spy sensors:

The city of Chicago is working with the Argonne National Laboratory and the University of Chicago, with funding from the National Science Foundation to deploy the Array of Things—a city-wide network of 500 lamppost-mounted sensors with an important air quality component.¹⁷⁷ This initiative has some parallels to the network of sensors developed by LinkNYC and Sidewalk Labs in New York City, using retrofitted sites of old public phones for new purposes,¹⁷⁸ including sensors in collaboration with Argonne National Laboratory and providing Wi-Fi at thousands of locations in the City.

LinkNYC Spy Kiosks Installation Videos

The kiosks have two high-definition video cameras recording viewers of digital displays and the surrounding area. A third aperture above the console appears to be a sensor of unknown purpose. LinkNYC claims there are 30 sensors in the units which are undefined. 10,000 of the kiosks are to be installed in New York City over 5 years.

Display assembly with camera-sensor circled being installed. Backside top left.
West 90th Street and Broadway, New York, NY. 20 May 2016.
